> All screenshots in this document are from the live application. Patient names, phone numbers and payments shown in the admin screens are sample data, used so that no real patient information appears here.

PROJECT AT A GLANCE

00 One clinic, one doctor, one connected system

The client

BRD Hospital is a gynaecology and maternity practice in Kuppam, Andhra Pradesh. It is led by **Dr. Haritha Mandava** (MBBS, MS OBG), an obstetrician, gynaecologist and sonologist with 14+ years of practice. Its patients come from across Andhra Pradesh, Tamil Nadu and Karnataka.

The brief

Replace phone-only bookings with a warm, trustworthy website that patients can use in their own language. Let them book and pay a small fee online. Give the front desk a single place to manage appointments, schedules, payments and maternity records.

What we delivered

Patient website

An emotional, story-led homepage with the doctor's profile, a five-stage pregnancy journey, interactive baby-sound cards and clear calls to book.

Booking & payment

A four-step booking flow with live slot availability, voice dictation, a UPI QR payment and WhatsApp screenshot sharing.

Staff dashboard

A secure admin area for appointments, availability, payment tracking, maternity records, Excel export and WhatsApp confirmations.

Design principles

- **Warmth over clinic-cold.** A soft rose and plum palette, real photography and an editorial serif typeface.
- **Every patient understood.** The whole site works in five regional languages, including the booking reasons.
- **Built for the phone.** Most patients arrive on mobile, so every screen was designed to work at that size.
- **Payments people already use.** UPI QR and WhatsApp fit how patients already pay and message.
- **Private by default.** Patients can create bookings but never read anyone else's data. Only signed-in staff can see records.
- **Never breaks the page.** If the server is unreachable, the site still loads and shows a clear message.

THE PATIENT WEBSITE

01 First impressions that feel like care

The homepage is a single scrolling story in nine sections. It moves from reassurance, to the doctor, to the pregnancy journey, and ends with an invitation to book. Soft animations reveal each section as the visitor scrolls.

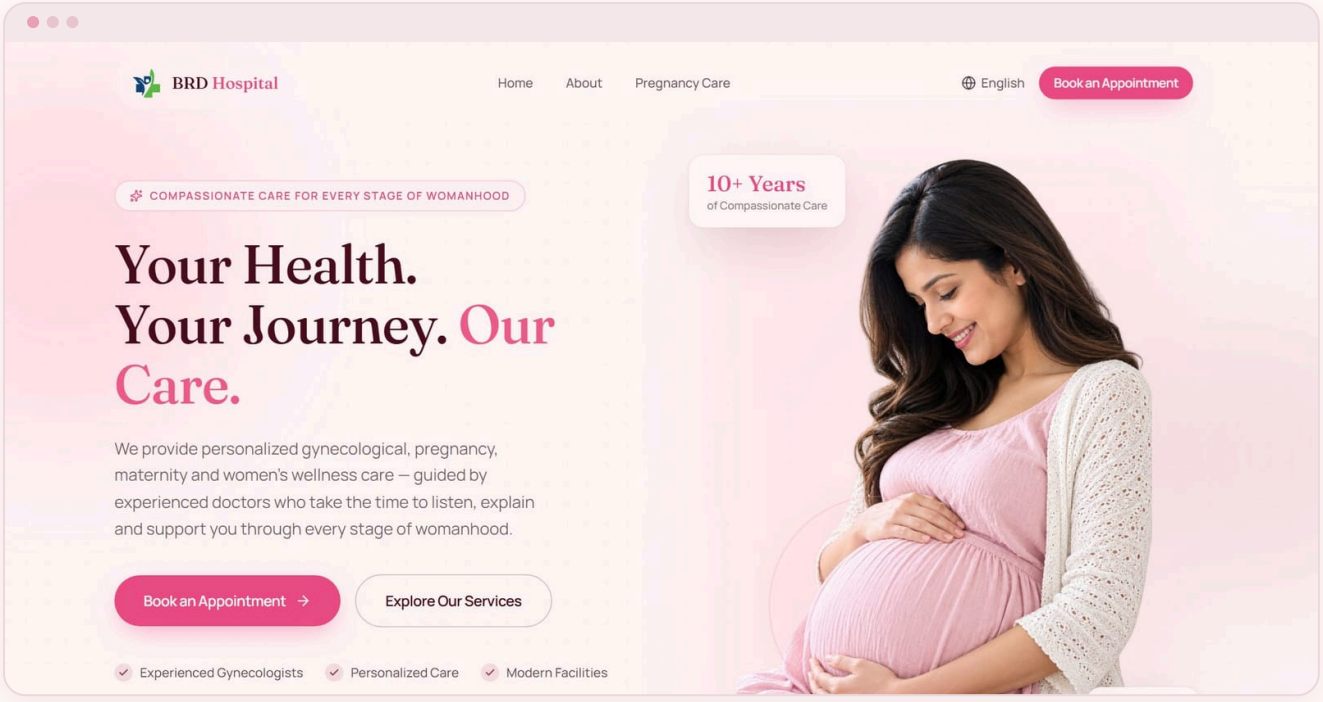

FIG. 01 **Hero.** A clear promise, two calls to action and trust figures. Hovering over the portrait reveals an illustration of the baby inside the womb.

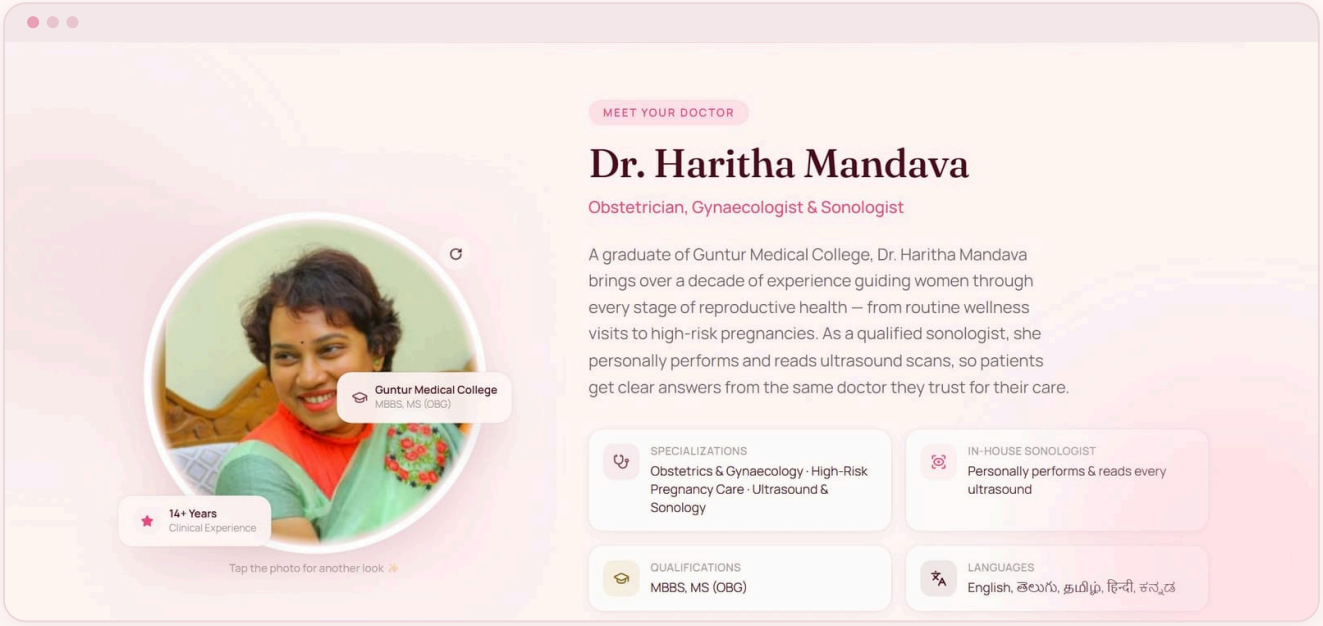

FIG. 02 **Meet your doctor.** Dr. Haritha's qualifications, specialisations and languages. Tapping the photo shows another portrait.

BEYOND MEDICINE

Caring through every chapter

A photo collage and short copy describe the practice's approach: clinical expertise delivered with warmth. The trust strip that follows highlights four points: experienced specialists, personalised treatment, modern facilities and 24-hour availability.

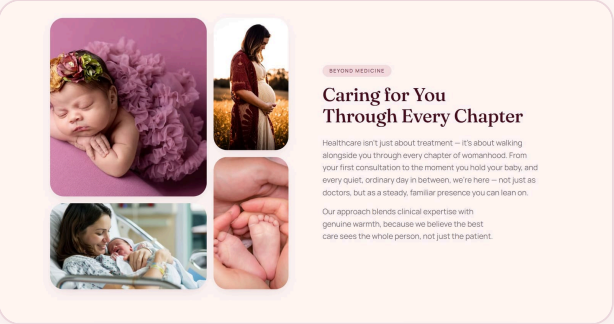

FIG. 03 About section with photo collage.

FIG. 04 Trust strip.

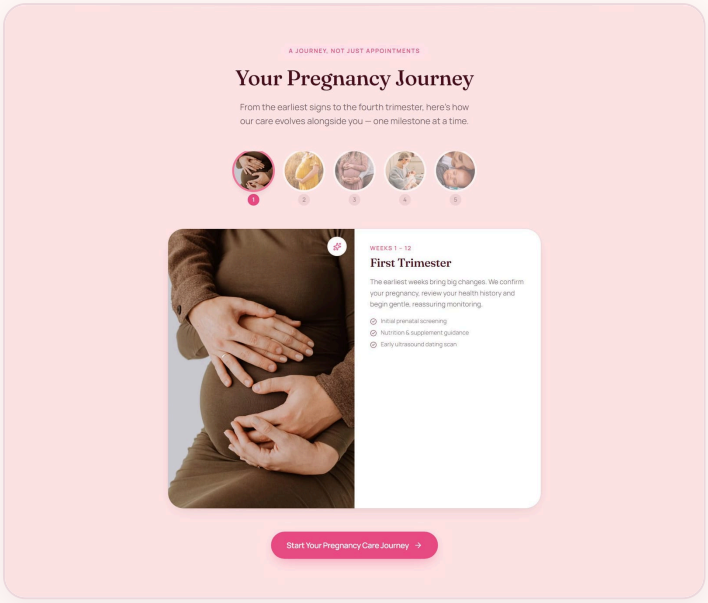

FIG. 05 **Your pregnancy journey.** Tap a stage to see the care it includes.

A JOURNEY, NOT JUST APPOINTMENTS

Five stages, one guide

An interactive timeline walks expecting mothers through each stage, with the care BRD Hospital provides at every point:

- **First trimester** (weeks 1–12): screening, nutrition and dating scan
- **Second trimester** (weeks 13–27): anomaly and growth scans
- **Third trimester** (weeks 28–40): weekly monitoring and birth plan
- **Delivery**: 24/7 maternity support and newborn care
- **Postnatal** (weeks 1–6): recovery, lactation and emotional wellness

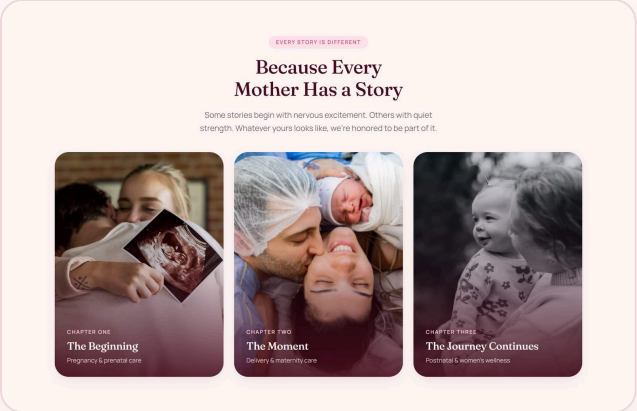

FIG. 06 **Because every mother has a story.** Three chapters: the beginning, the moment and the journey that continues.

FIG. 07 **The sounds of baby emotions.** Hovering over or tapping a card plays a real baby sound, and only one sound plays at a time.

Small details that make it memorable

- A "womb reveal" hover effect on the hero portrait, with a video of the baby moving
- Numbers count up when the statistics band scrolls into view
- A site-wide audio player so sounds never overlap
- Optimised WebP/AVIF images so pages load fast on mobile data

FIG. 08 Animated statistics band.

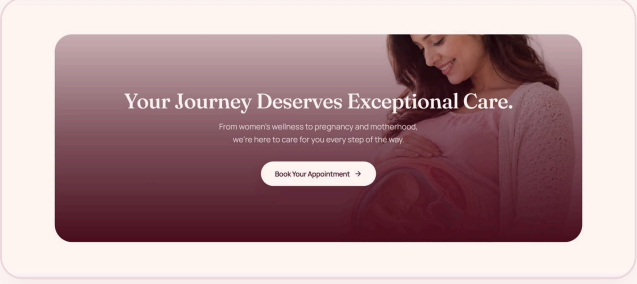

FIG. 09 Closing call to action.

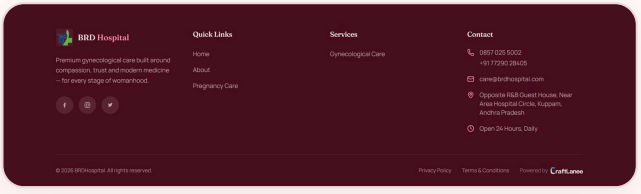

FIG. 10 Footer with contact details, address and 24-hour availability.

FIVE LANGUAGES

02 Speaking every patient's language

BRD Hospital is close to three state borders. On a first visit, the site asks which language the patient prefers and remembers the choice. Every heading, button, form label and error message is translated.

English · తెలుగు Telugu · தமிழ் Tamil · हिन्दी Hindi · ಕನ್ನಡ Kannada

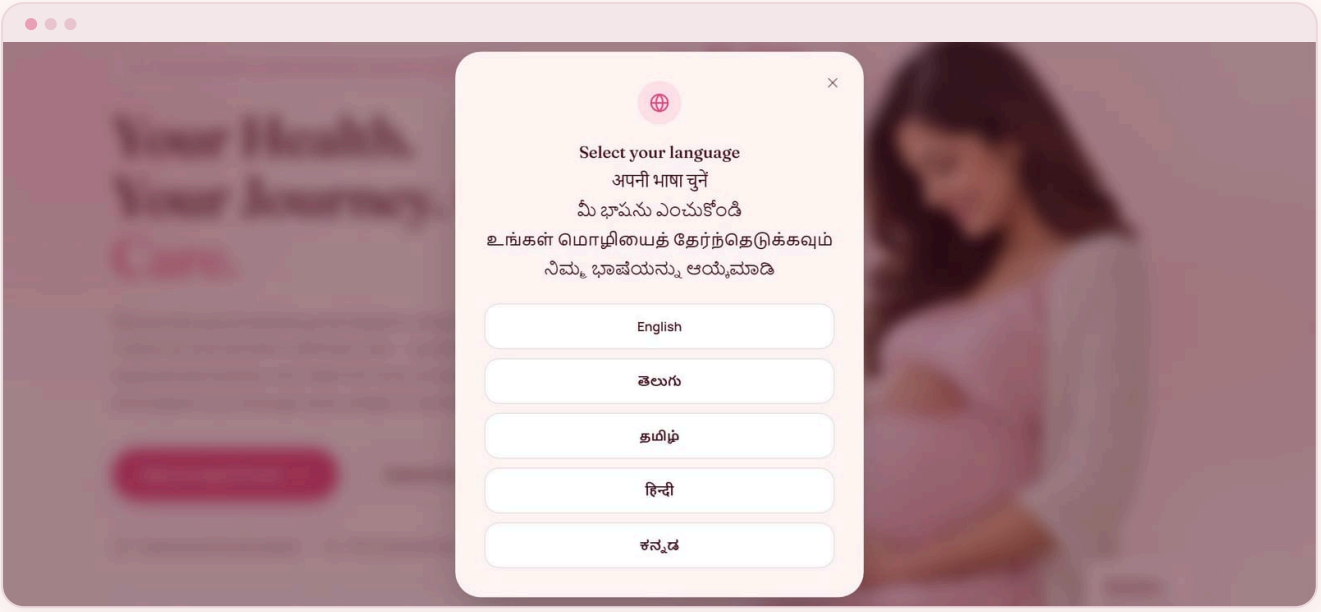

FIG. 11 **Welcome language picker**, shown once, with the prompt written in all five scripts.

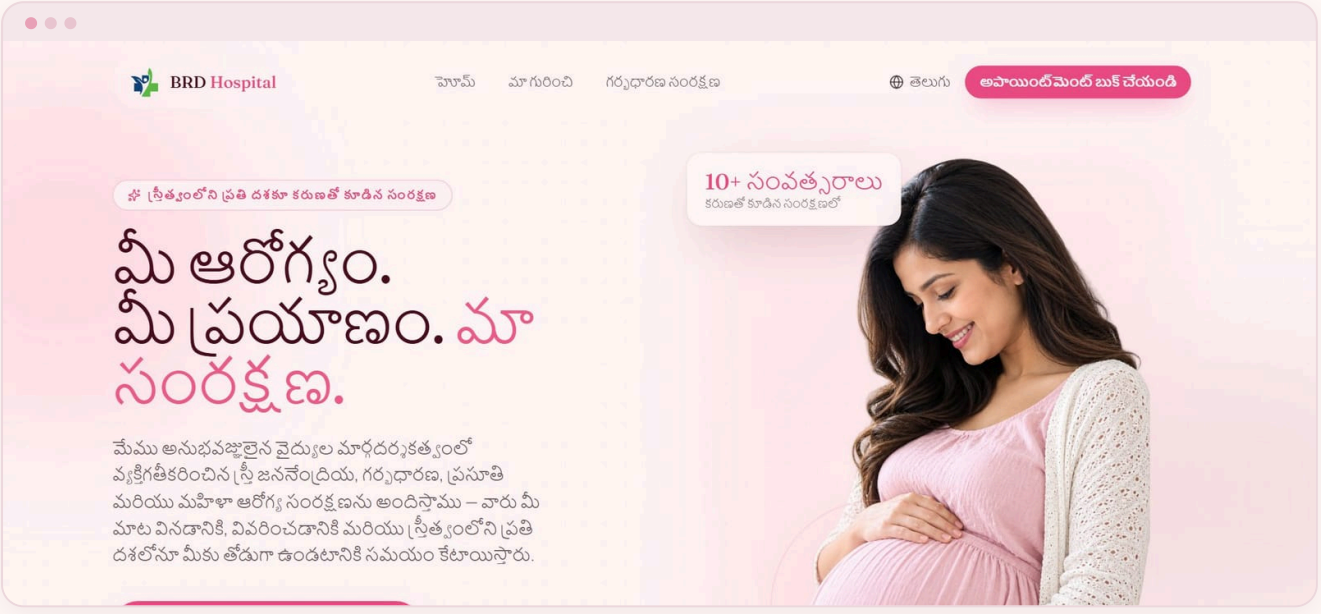

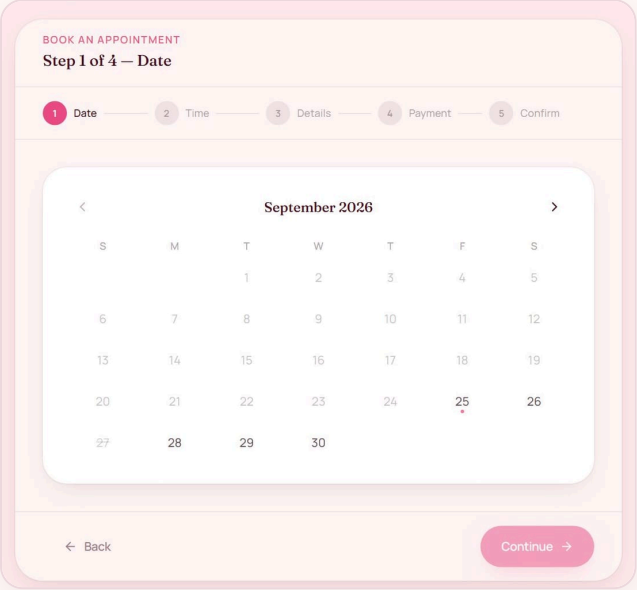

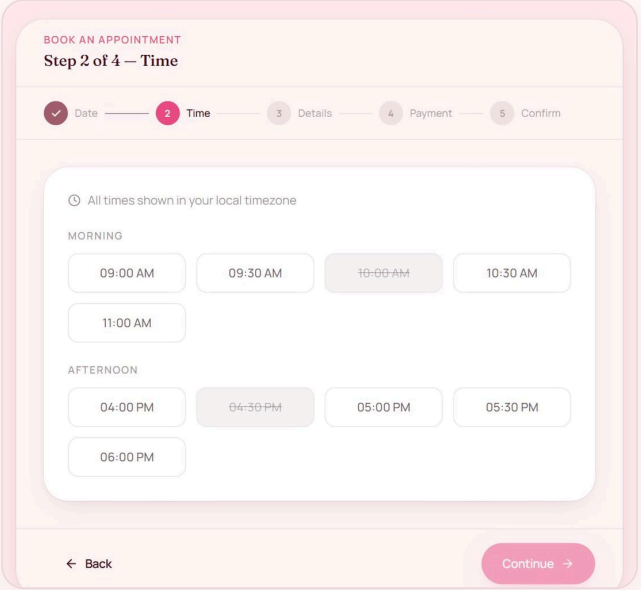

FIG. 12 **The same homepage in Telugu.** When staff add a new booking reason in English, it is translated into the other four languages automatically.

ONLINE BOOKING & PAYMENT

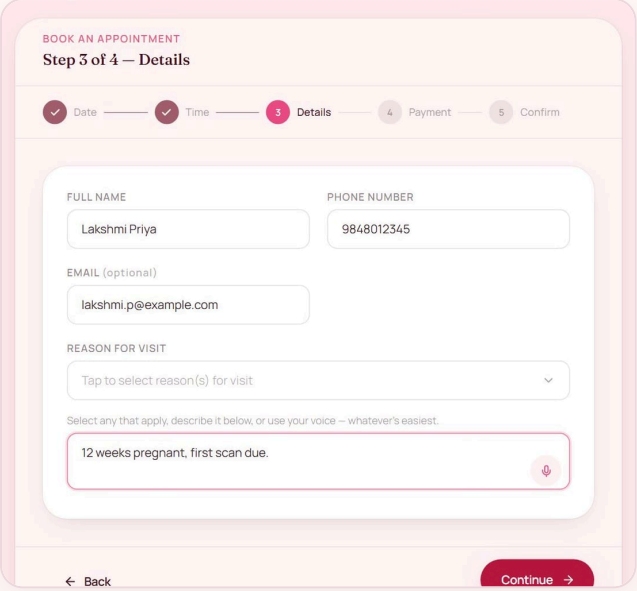

03 From "I need to see a doctor" to booked in four steps

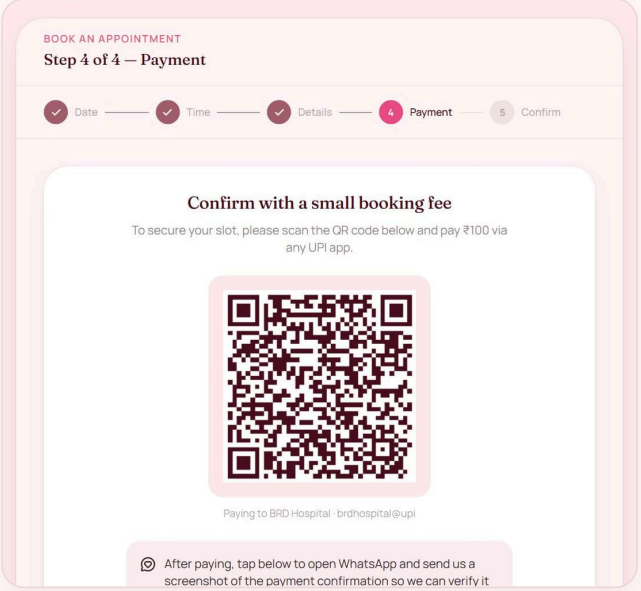

STEP 1 **Date.** Past days and days the doctor has blocked are greyed out automatically.

STEP 2 **Time.** Slots that are already booked or blocked are crossed out, so the same slot can't be booked twice.

STEP 3 **Details.** Name, phone and reasons for the visit. Patients can speak their reason instead of typing it (voice dictation).

STEP 4 **Payment.** A UPI QR code for the booking fee, a WhatsApp button for the screenshot, and a field for the UPI transaction ID.

HOW A BOOKING GETS CONFIRMED

No payment gateway fees, and every payment checked

Many small clinics can't justify gateway charges. We built the process around UPI and WhatsApp instead, with a clear record for staff at each stage.

1 — PATIENT
Books a slot
The date, time and details are saved and the slot is held.

2 — PATIENT
Pays by UPI
Scans the QR code with any UPI app and enters the transaction ID.

3 — PATIENT
Shares proof
One tap opens WhatsApp to send the payment screenshot.

4 — STAFF
Verifies
Matches the transaction ID and marks the booking Paid and Confirmed.

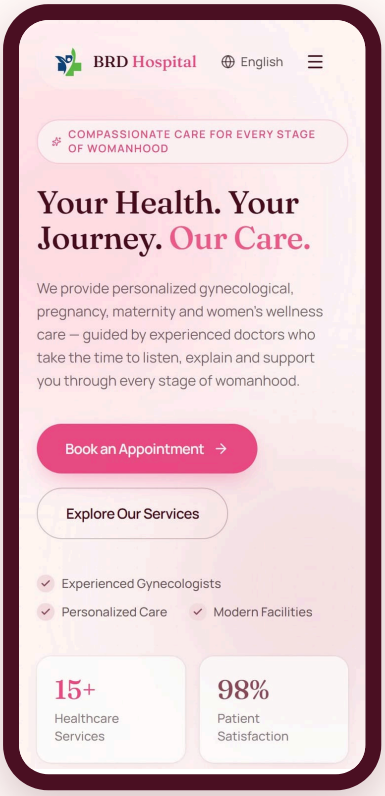

5 — STAFF
Confirms
Sends a ready-made WhatsApp confirmation with the date, time and address.

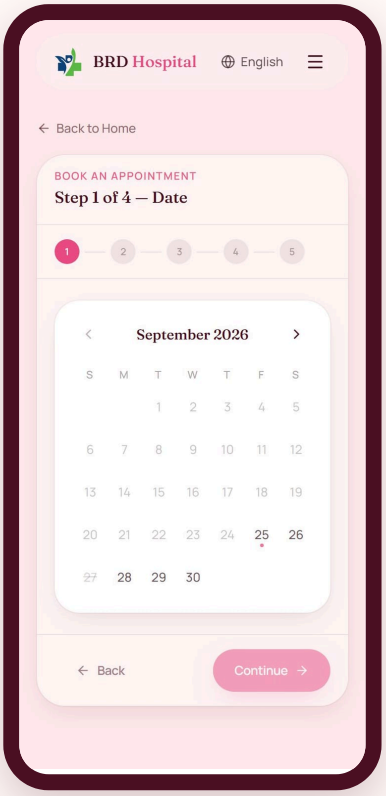

Instant alerts

Staff receive an email as soon as a patient books.

Confirmation email

Once staff confirm the booking and the payment, the patient is emailed automatically (if they gave an email address).

DESIGNED MOBILE-FIRST

In the patient's pocket

Most patients find the clinic on their phone, so the booking flow was designed at phone size first. It uses large tap targets, a thumb-friendly calendar and a compact step indicator.

- Works on any modern phone, tablet or desktop browser
- No app to install: patients just open a link
- The booking page link can be shared on WhatsApp or printed as a QR code at reception

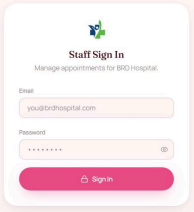

FIG. 13-14 Homepage and booking on a phone.

STAFF ADMIN DASHBOARD

04 The front desk, in one screen

A private dashboard behind a staff login. There is no public sign-up: accounts are created by the clinic owner only. Six modules cover a clinic's daily work.

Overview · Appointments · Availability · Payments · Patient Records · Settings

At a glance, every morning

- Ten live counters: total, today, upcoming, completed, cancelled and no-show bookings, plus pending, successful and failed payments and total revenue
- A booking calendar with a count on each day. Click a day to see its patients
- A badge in the menu shows how many bookings are waiting for review

FIG. 15 **Staff sign-in.** Secure email and password login.

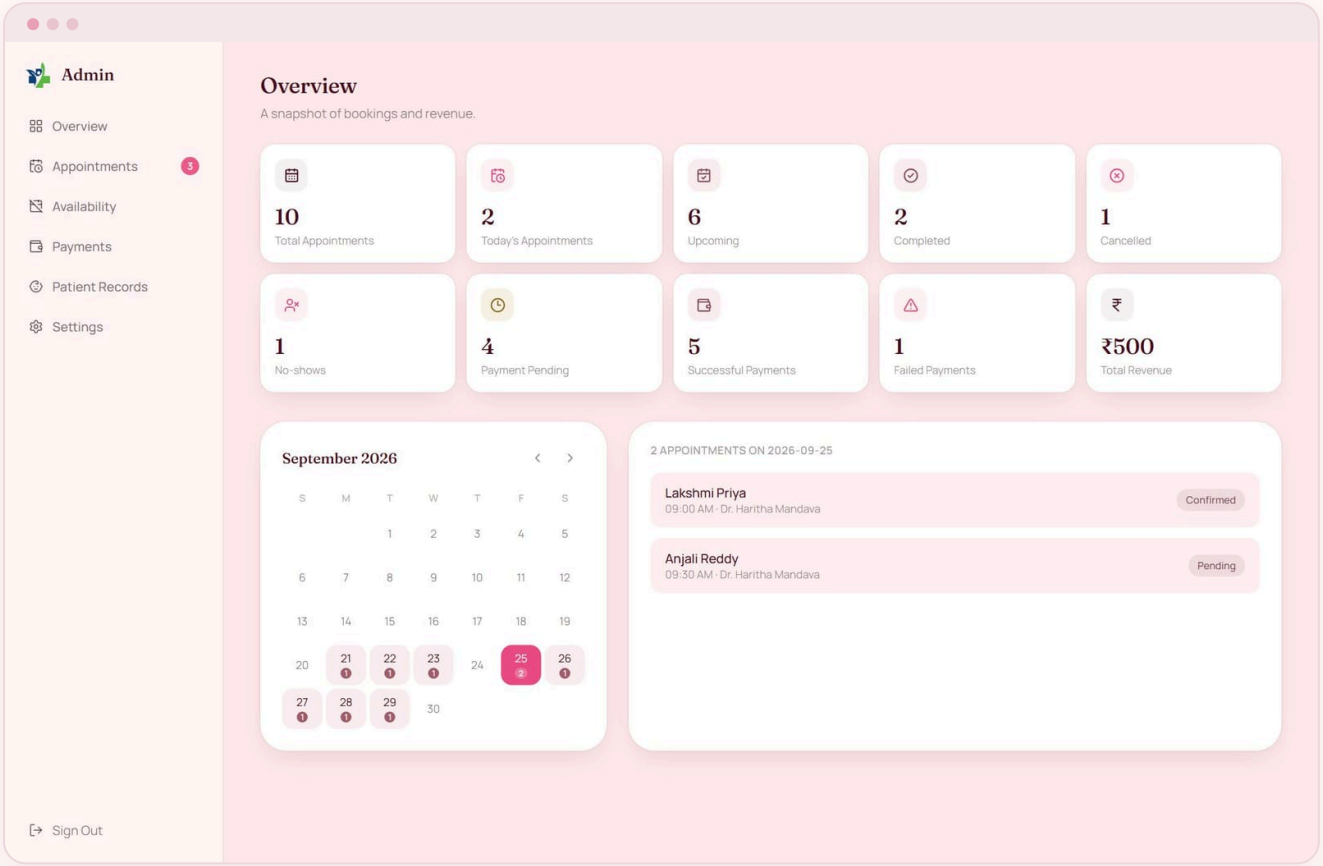

FIG. 16 **Overview.** Booking and revenue figures with a monthly calendar.

APPOINTMENTS

Every booking, searchable and actionable

Filter by status, search by name, phone, email or UPI transaction ID, or jump to a date. Booking status and payment status are updated separately from dropdowns in the table.

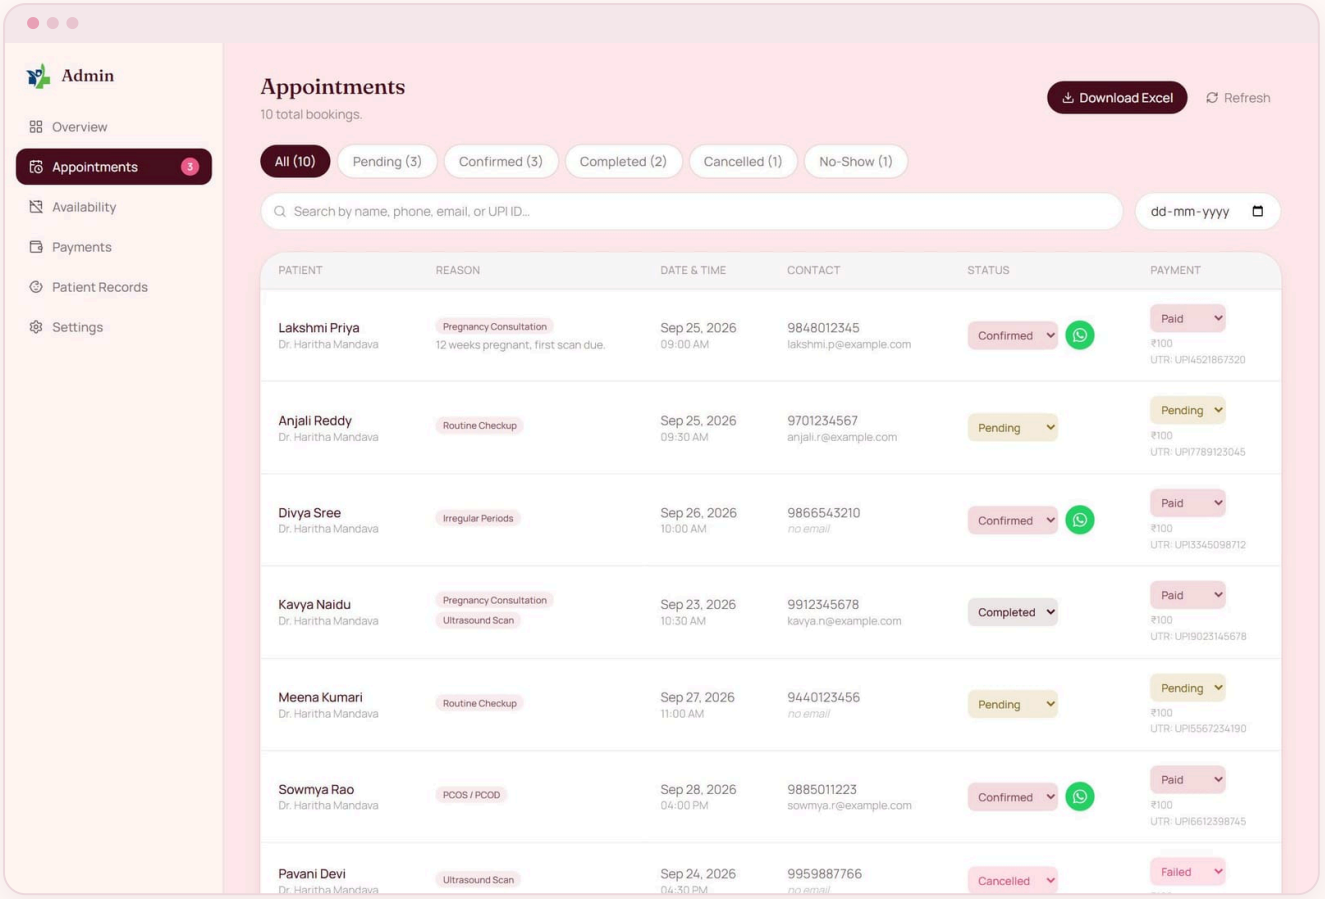

FIG. 17 **Appointments.** Status filters with counts, reasons as tags, the UPI transaction ID next to each payment, and a WhatsApp button on confirmed bookings. "Download Excel" exports the list.

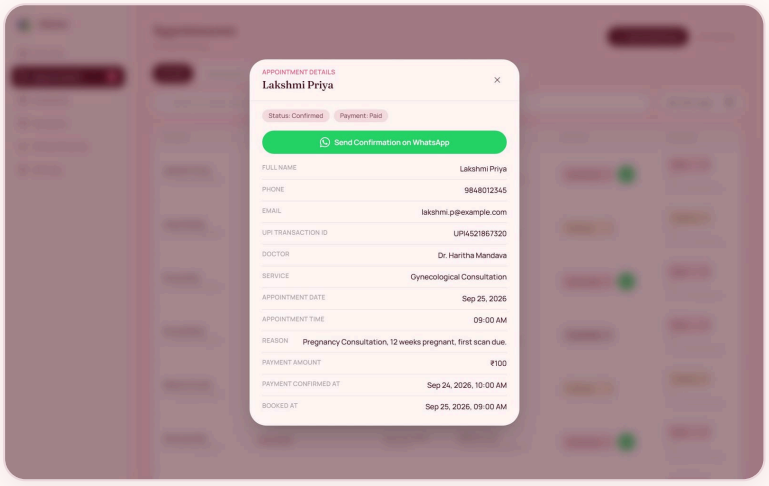

FIG. 18 **Appointment detail**, opened by clicking a patient's name.

Statuses staff can set

Booking

`Pending` `Confirmed` `Completed` `Cancelled` `No-show`

Payment

`Pending` `Paid` `Failed`

"Send Confirmation on WhatsApp" opens a chat with the patient, pre-filled with the doctor, service, date, time and clinic address.

AVAILABILITY

The doctor's calendar, controlled in seconds

Block a single slot for a surgery, or a whole day for a conference or leave. Patients see the change immediately. Working hours can also be edited, which updates the time slots offered everywhere on the site.

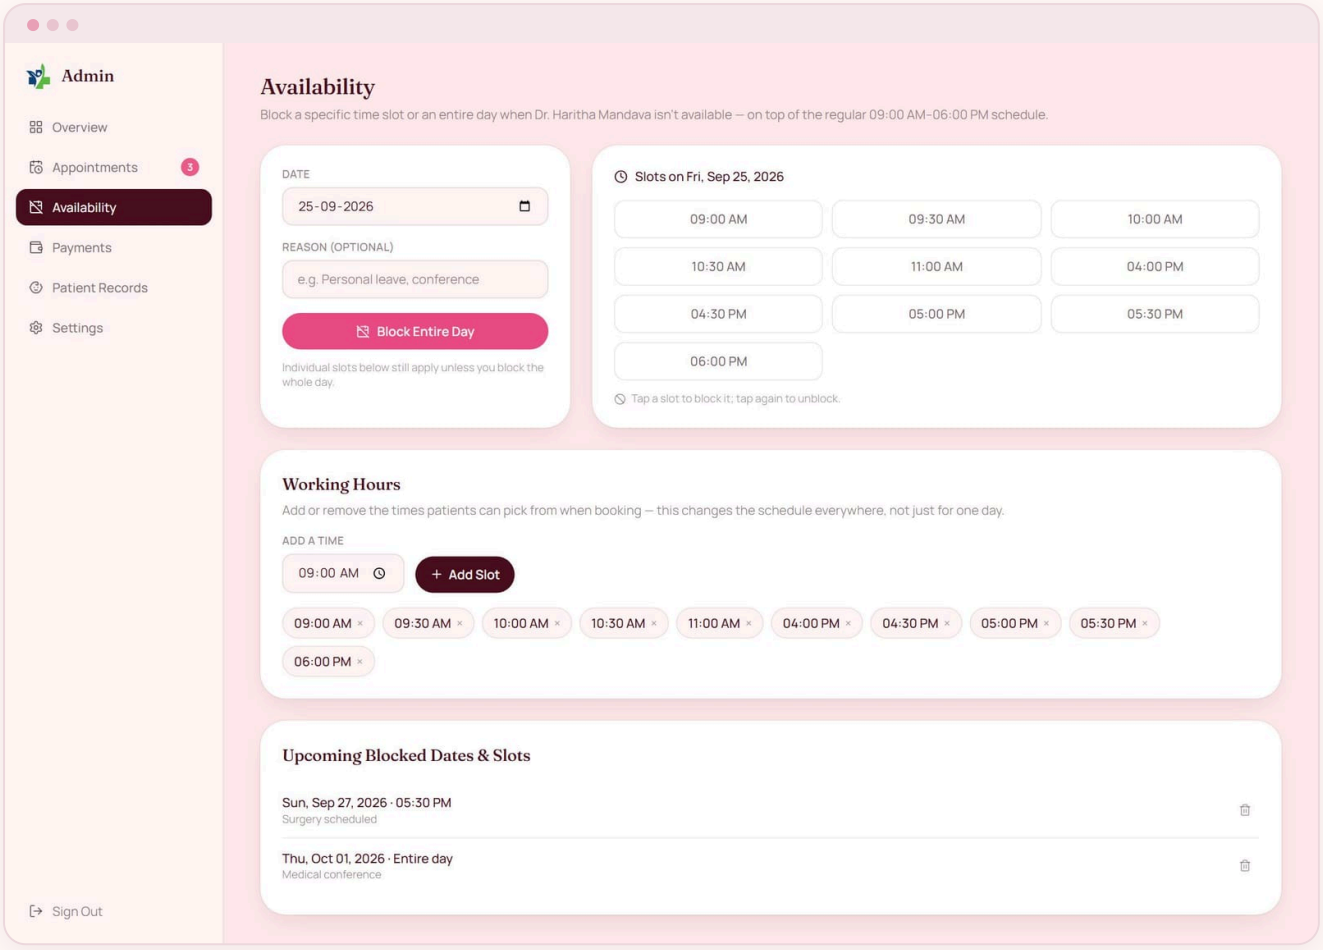

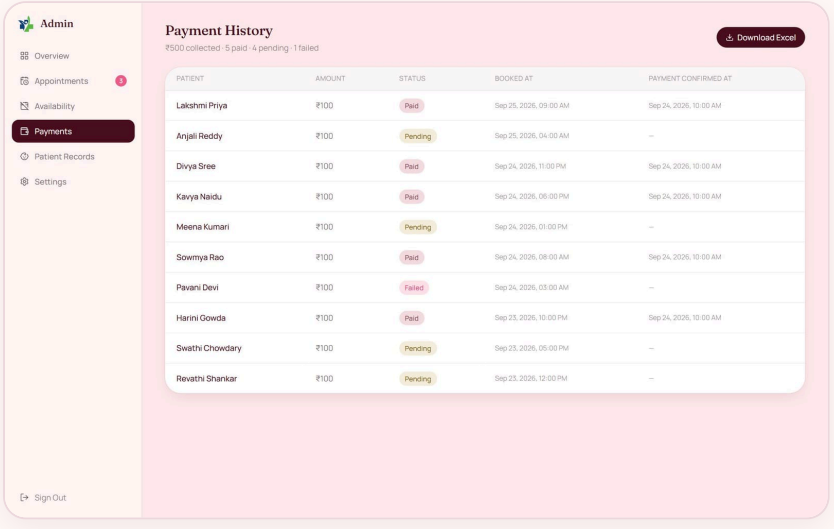

FIG. 19 **Availability.** Block a day or slot, edit working hours, and see upcoming blocks with their reasons.

PAYMENTS

Money, accounted for

- Total collected, and counts of paid, pending and failed payments
- The time each payment was confirmed is recorded
- One-click Excel (CSV) export for accounts

FIG. 20 **Payment history** with a summary of amounts collected and pending.

PATIENT RECORDS

A maternity register, digitised

This replaces the paper register. Each mother is recorded while she is expecting, and the record is updated after delivery with details of the birth and the baby. Staff can search by mother or father name, phone number or district.

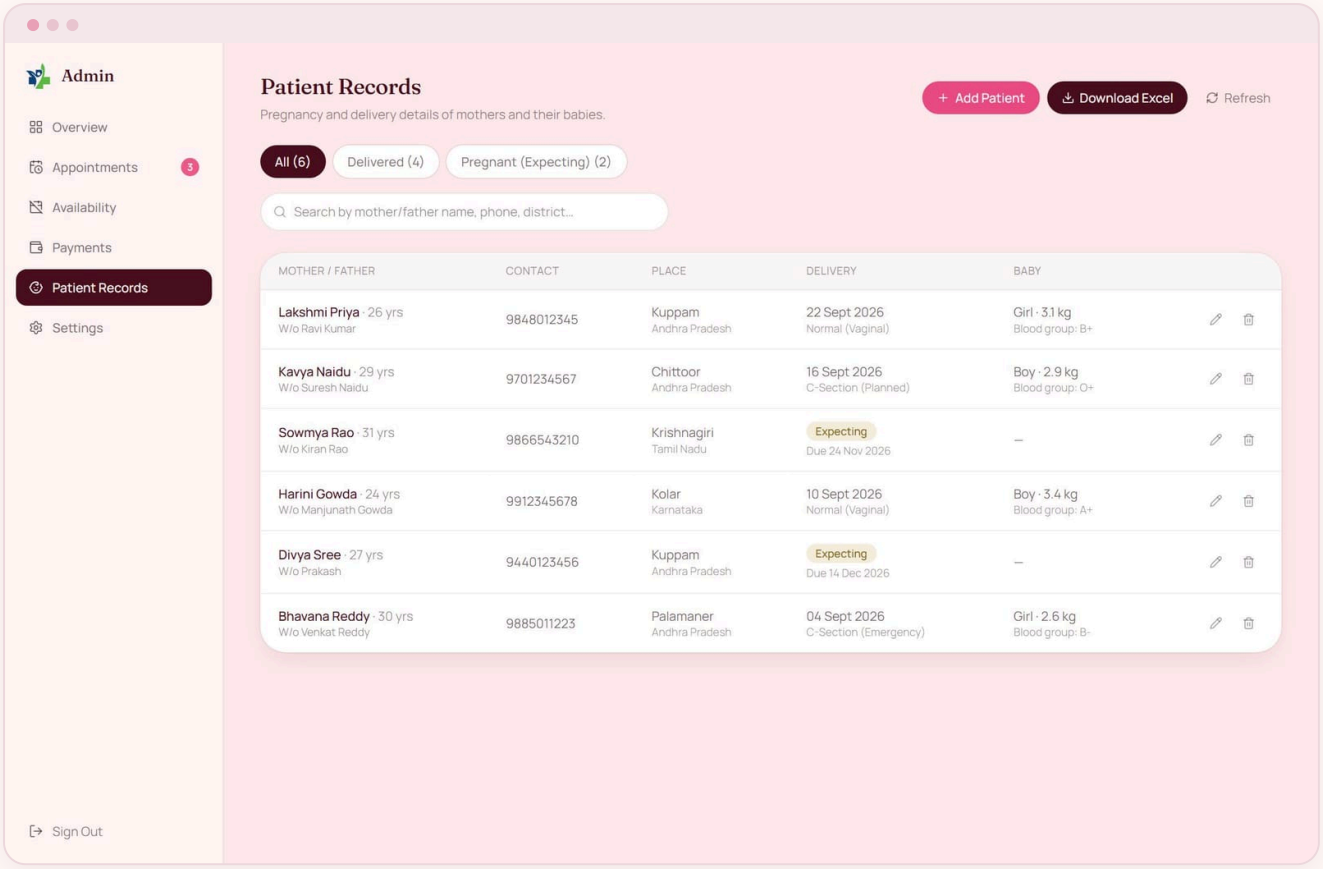

FIG. 21 **Patient records.** Delivered and expecting mothers, with the delivery type, baby's weight and blood group.

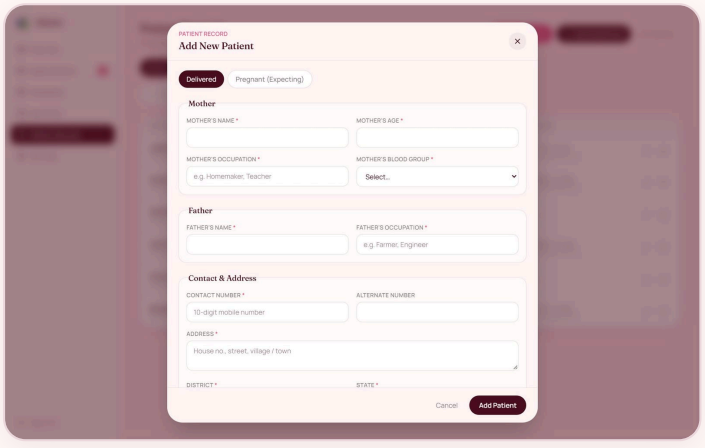

FIG. 22 **Add patient form.** Required fields are checked before saving.

WHAT EACH RECORD HOLDS

Mother	Name, age, occupation, blood group
Father	Name, occupation
Contact	Phone numbers, address, district, state, PIN
Pregnancy	Expected due date, gestation weeks
Delivery	Date and type (normal, C-section, assisted, VBAC)
Baby	Birth date and time, weight, gender, blood group

SETTINGS

Run the clinic without calling a developer

Everything a clinic might need to change is editable from the dashboard, and changes take effect on the website immediately.

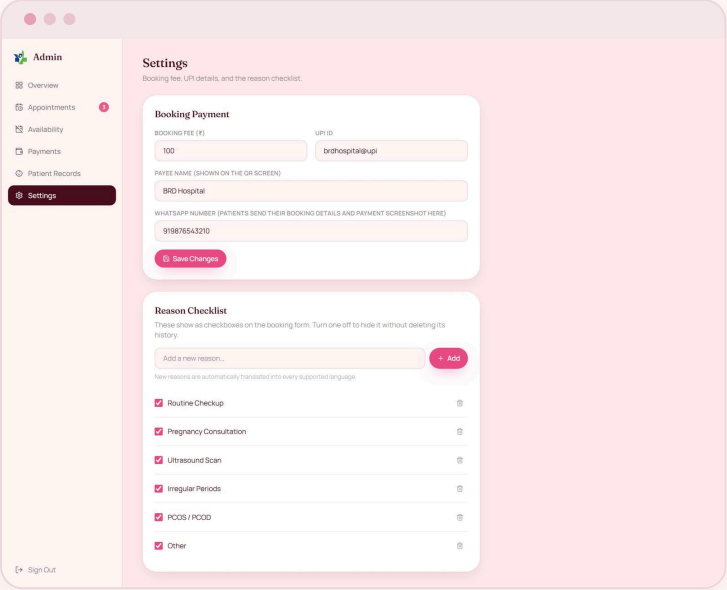

FIG. 23 **Settings.** Booking payment details and the checklist of visit reasons.

Booking payment

Booking fee, UPI ID, the payee name shown under the QR code, and the WhatsApp number patients send screenshots to.

Reason checklist

Add, hide or remove the "reason for visit" options patients choose from. New options are translated into all five languages automatically.

Working hours

Add or remove bookable time slots from the Availability module. The booking page updates straight away.

TECHNOLOGY & SECURITY

05 Modern, lean and low-maintenance

The website talks directly to a managed cloud database, so there is no separate server to run or patch. Hosting costs stay close to zero at clinic scale.

PATIENTS

Public website

Homepage, five languages, four-step booking with UPI and WhatsApp

STAFF ONLY

Admin dashboard

Six modules behind a secure login

HOSTING

Netlify / Railway

Global CDN. Every code update is deployed automatically

SUPABASE · MANAGED CLOUD

PostgreSQL database

Appointments, availability, maternity records, visit reasons and clinic settings, protected by row-level security policies

Authentication

Staff email and password login. Accounts can only be created by the owner

Edge functions

notify-new-booking emails staff when a booking arrives. **send-confirmation** emails the patient once the booking is verified

INTEGRATIONS

UPI · WhatsApp · Translation API

QR code payments, click-to-chat messages and automatic translation

LAYER	TECHNOLOGY	WHY
Interface	React 19 · TypeScript	Fast, type-safe and widely supported
Styling & motion	Tailwind CSS v4 · Framer Motion	A consistent design system with smooth animation
Build	Vite	Small, fast-loading production builds
Backend	Supabase (Postgres, Auth, Edge Functions)	Managed, secure and scalable, with no server upkeep
Languages	Custom translation layer	Five languages with no heavy libraries
Hosting	Netlify (or Railway)	HTTPS, CDN and automatic deploys

SECURITY & PRIVACY

Patient data treated as sensitive

Row-level security
The database checks every request. Patients can only create a booking. They can't read, change or list anyone else's data.

No public sign-up
Only the clinic owner can create staff accounts. The admin area is not exposed to the public.

Maternity records are staff-only
Delivery and baby records have no public access of any kind, whether reading or writing.

Checked input
The form checks every field before saving. The database also enforces blood groups, ages, baby weights and statuses, and rejects two bookings for the same slot.

DATA MODEL

TABLE	HOLDS	WHO CAN ACCESS
`appointments`	Bookings, patient contact details, reasons, booking and payment status, UPI transaction ID	Patients create · staff manage
`blocked_slots`	Days and time slots the doctor is unavailable	Public read · staff manage
`delivery_records`	Maternity register: parents, pregnancy, delivery and baby details	Staff only
`reason_options`	Visit reasons with translations in five languages	Public read · staff manage
`app_settings`	Booking fee, UPI ID, payee name, WhatsApp number, time slots	Public read · staff manage
`doctors` · `services`	Doctor and service catalogue, so more doctors can be added later	Public read

READY TO GROW

More doctors
The database already supports several doctors and services.

More languages
Adding a language means adding one set of translations.

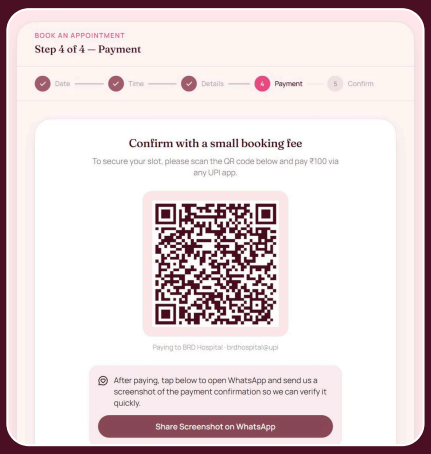

Online payments
A payment gateway can be added to the existing payment step later.

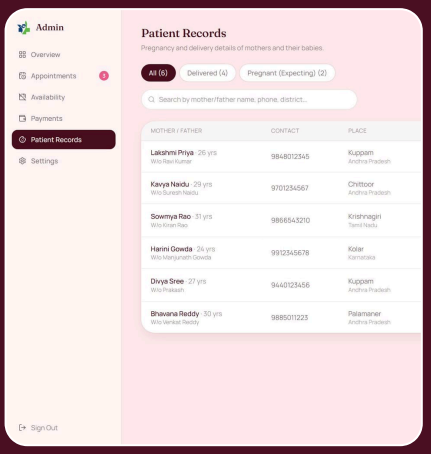

06 · SUMMARY

Everything delivered

- Story-led homepage in nine sections with a doctor profile
- Interactive five-stage pregnancy journey
- Womb-reveal hover effect and baby-sound cards
- Five languages, with a welcome language picker
- Four-step booking that prevents double-booking
- Voice dictation for the reason for visit
- UPI QR payment, WhatsApp proof and transaction ID capture
- Email alerts to staff and confirmation emails to patients
- Secure staff login with no public sign-up
- Overview with ten live counters and a booking calendar
- Appointment management with search, filters and a detail view
- One-tap WhatsApp confirmations to patients
- Availability: block slots or days and edit working hours
- Payment tracking with Excel export
- Digital maternity register with blood-group checks
- Editable clinic settings and a translated reason checklist

CraftLanee

We design and build digital products for clinics, schools and local businesses. If your practice needs something similar, we'd be glad to talk.
