HEALTHCARE · BOOKING · PAYMENTS · CLINIC ADMIN

A front desk that never closes.

We built KC Hospital's women's-care clinic in Kuppam a website where patients book a 10-minute consultation slot, pay by UPI and get confirmed. They can do it in English, Telugu, Tamil or Kannada. Behind it, the clinic team runs everything from one admin console.

CLIENT	DELIVERED
Dr. Shilpa Sonnepalli, MBBS, DGO **KC Hospital, Kuppam**	**Website, booking, payments, admin**
BUILT	**STATUS**
Aug – Sep 2026	**Live at drshilpawomenscare.com**

4

languages, switchable on every page, including the booking form

10 slots/day

10-minute consultations from 1:00 to 2:30 PM, one patient per slot

₹300

consultation fee paid by UPI QR before the visit. The clinic can change it or make booking free.

3 channels

WhatsApp, SMS and email confirmations to patient and clinic

THE BRIEF

Appointments were booked by phone.

Every appointment meant a call, a name written in a register, and a follow-up if the patient didn't show. Kuppam sits where Andhra Pradesh, Tamil Nadu and Karnataka meet, so patients call in three regional languages as well as English.

BEFORE	AFTER
Patients call during clinic hours to ask for a time	Patients pick an open slot online, day or night
Two patients promised the same time	Each slot can be booked once. The database enforces it.
No-shows cost a consultation	The fee is paid by UPI before the slot is confirmed
Staff explain directions and timings on the phone	The site answers it, in the patient's own language
Delivery records kept in paper files	Searchable patient records with Excel export

FOR PATIENTS

Book a slot and pay in about two minutes.

Most patients book from a phone, so we designed for the phone first. The booking form only shows times that are still free for the chosen date.

1 **Fill in details and choose a time**

Name, phone, place and date. Booked slots are struck out, and the patient can tick one or more reasons for the visit.

2 **Scan the UPI QR and pay**

The QR is generated with the exact fee filled in, so it works in Google Pay, PhonePe or Paytm. Nothing is saved until the patient submits the payment reference.

3 **The clinic verifies the payment**

The reference appears in the admin console for the team to confirm. A reference that has already been used is rejected automatically.

4 **Everyone is notified**

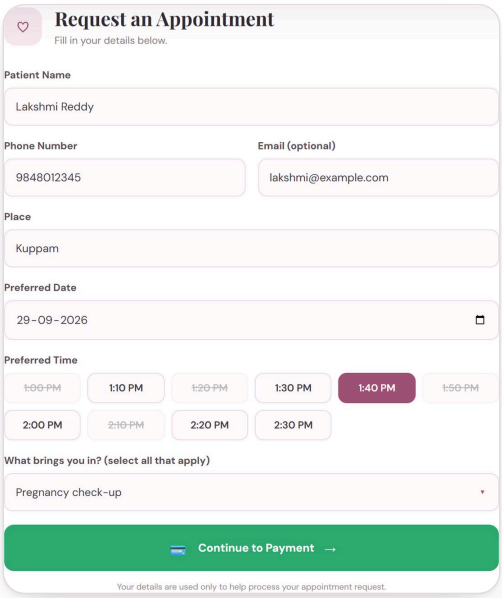

The patient and the clinic both get the date, time and amount paid.

WhatsApp SMS Email

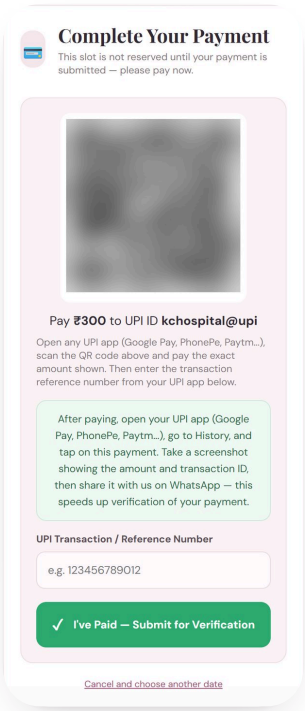

TUE 29 SEP · SLOT BOARD 6 OF 10 OPEN

~~1:00~~	1:10	~~1:20~~	1:30	1:40
~~1:50~~	2:00	~~2:10~~	2:20	2:30

Selected Open Already booked

Step 1. Booking form with live slot availability.

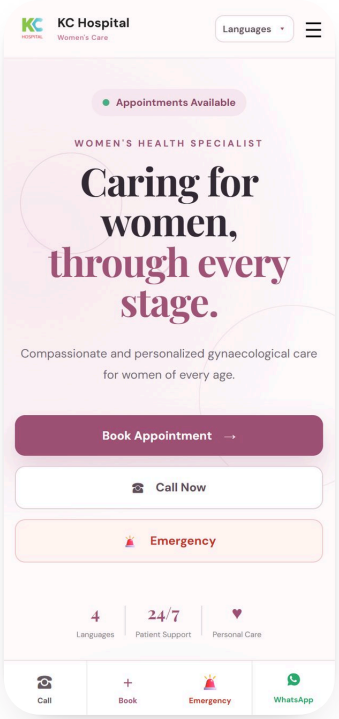

Step 2. UPI payment. QR blurred here.

BUILT FOR KUPPAM

Four languages, and patients can speak instead of type.

The whole site switches language from the header. The patient's choice is remembered on later visits. The booking form has a microphone button that turns speech into text in the chosen language. When the clinic adds a new reason for visit, it is translated into the other three languages automatically.

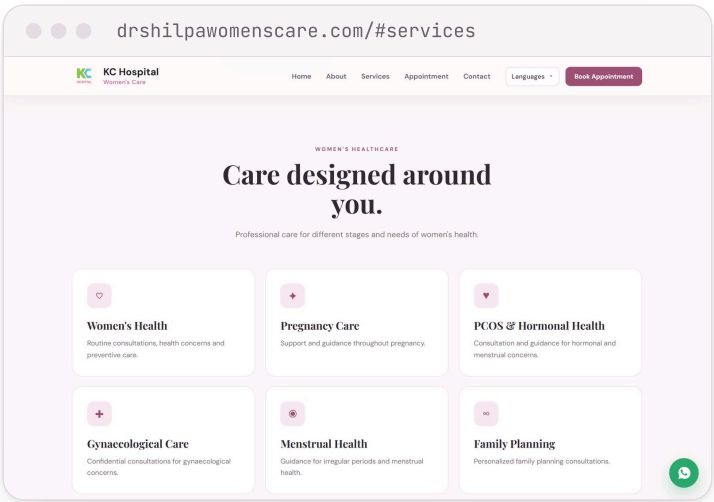

English Default	తెలుగు Telugu · Andhra Pradesh
தமிழ் Tamil · Tamil Nadu	ಕನ್ನಡ Kannada · Karnataka

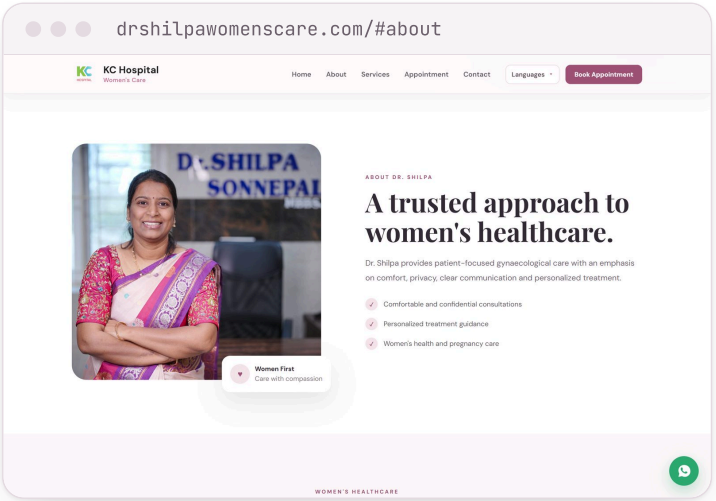

English. The call, book, emergency and WhatsApp buttons stay pinned to the bottom.

Telugu. The same page after one tap on "Languages".

Services. Six areas of care written in plain language, not medical jargon.

About. Introduces the doctor so first-time patients know who they will see.

FOR THE CLINIC TEAM

One console for the whole front desk.

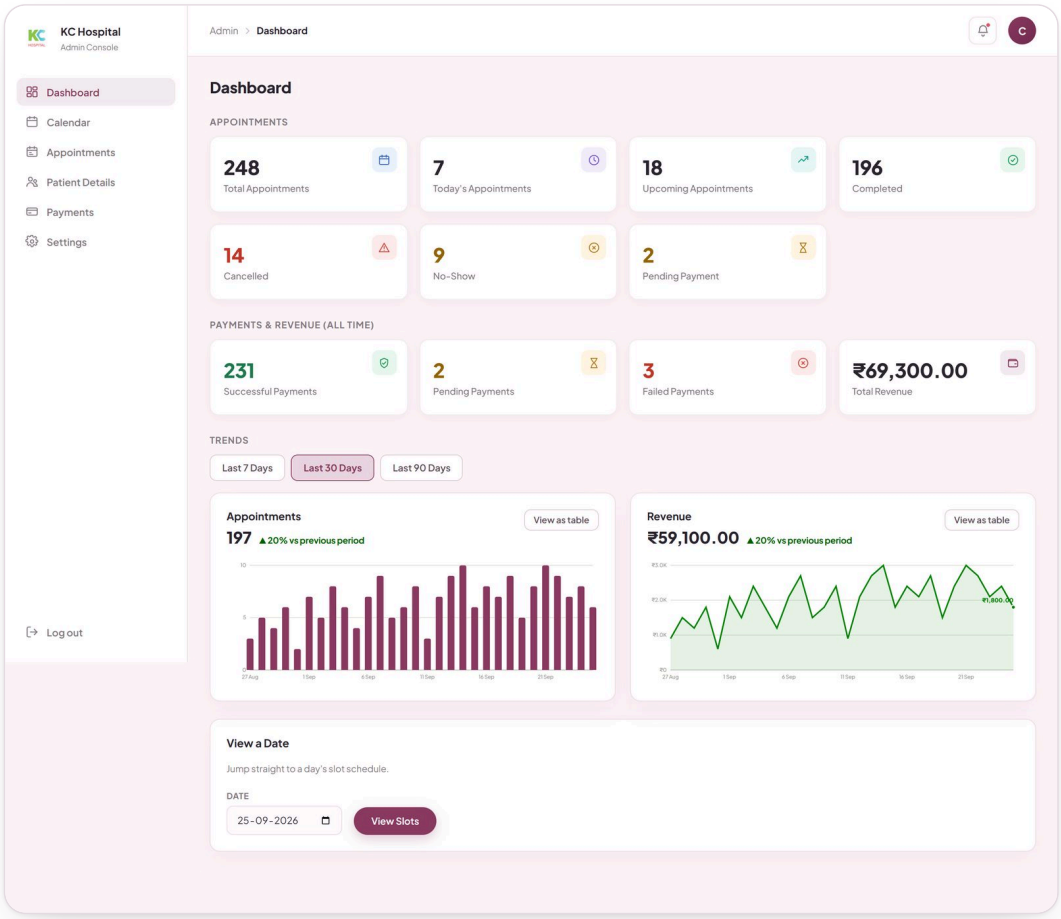

The team signs in to a private admin area. Every appointment, payment and patient record is there, and every list can be downloaded to Excel.

Privacy The admin screenshots in this document use made-up sample patients. No real patient data is shown.

DASHBOARD

The clinic's numbers at a glance

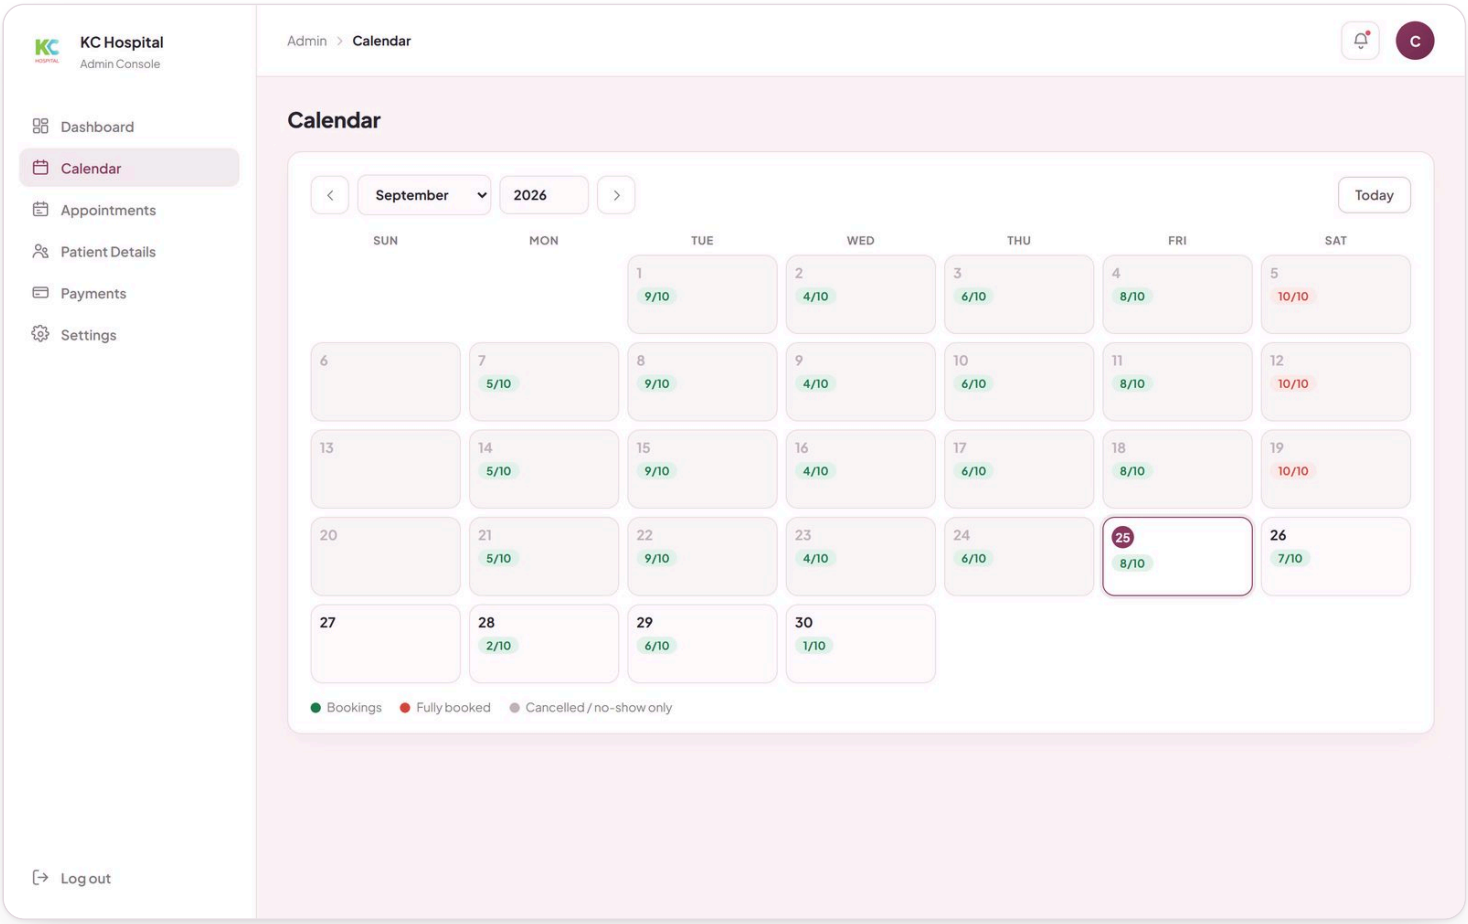

- Today's and upcoming appointments, completed, cancelled and no-shows
- Payment status and total revenue
- Appointment and revenue trends for 7, 30 or 90 days, compared with the previous period

CALENDAR

See at a glance which days are full

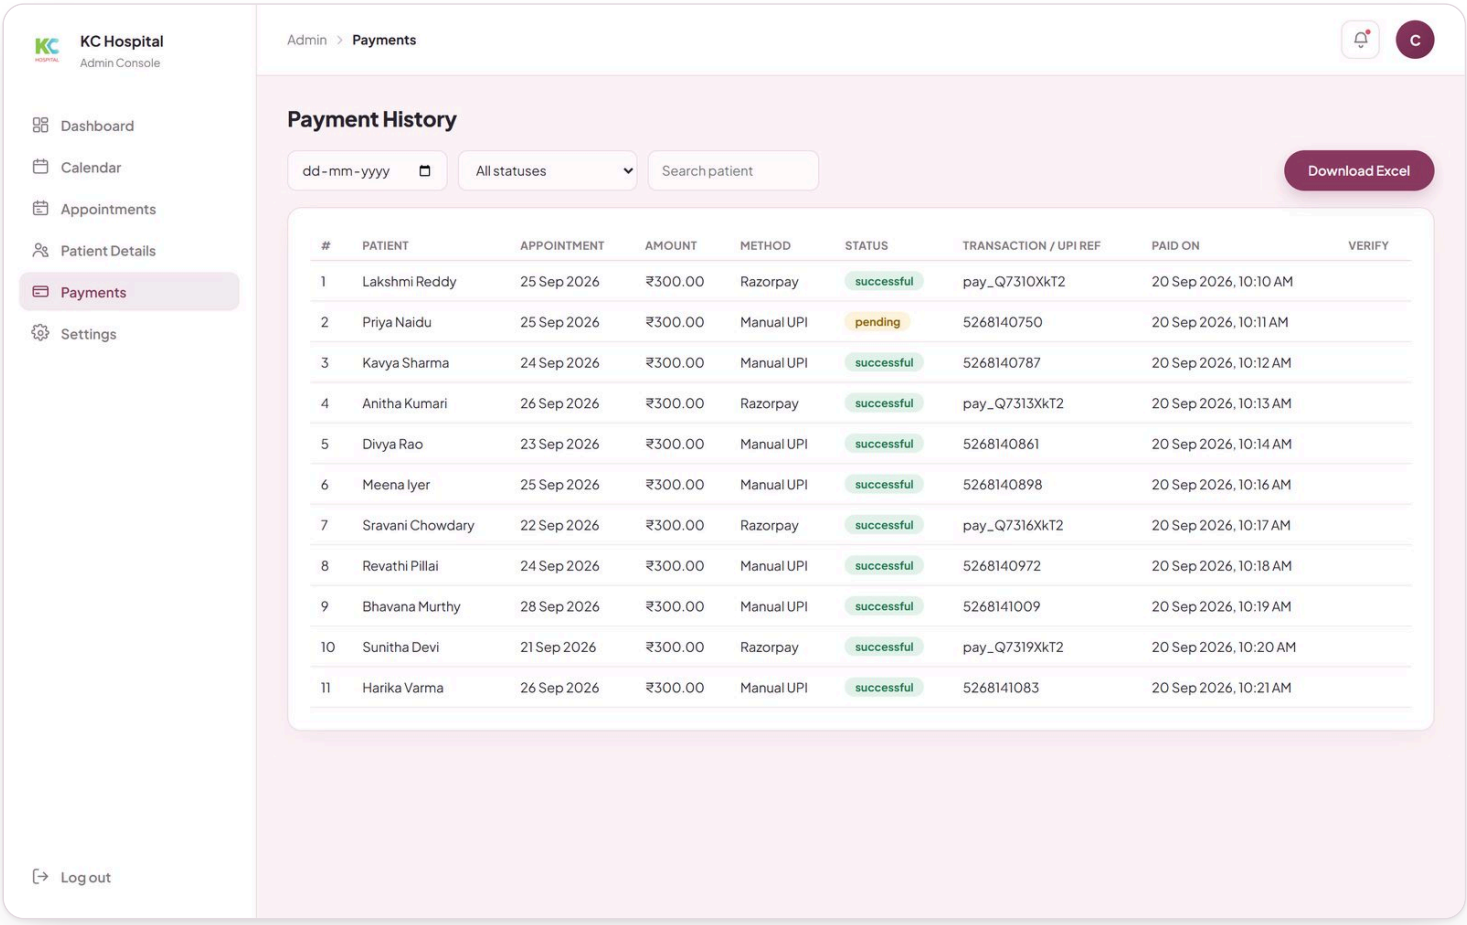

- Each day shows how many of its 10 slots are booked
- Fully booked days are marked in red
- Click a day to see that day's schedule by time

PAYMENTS

Verify UPI payments in one click

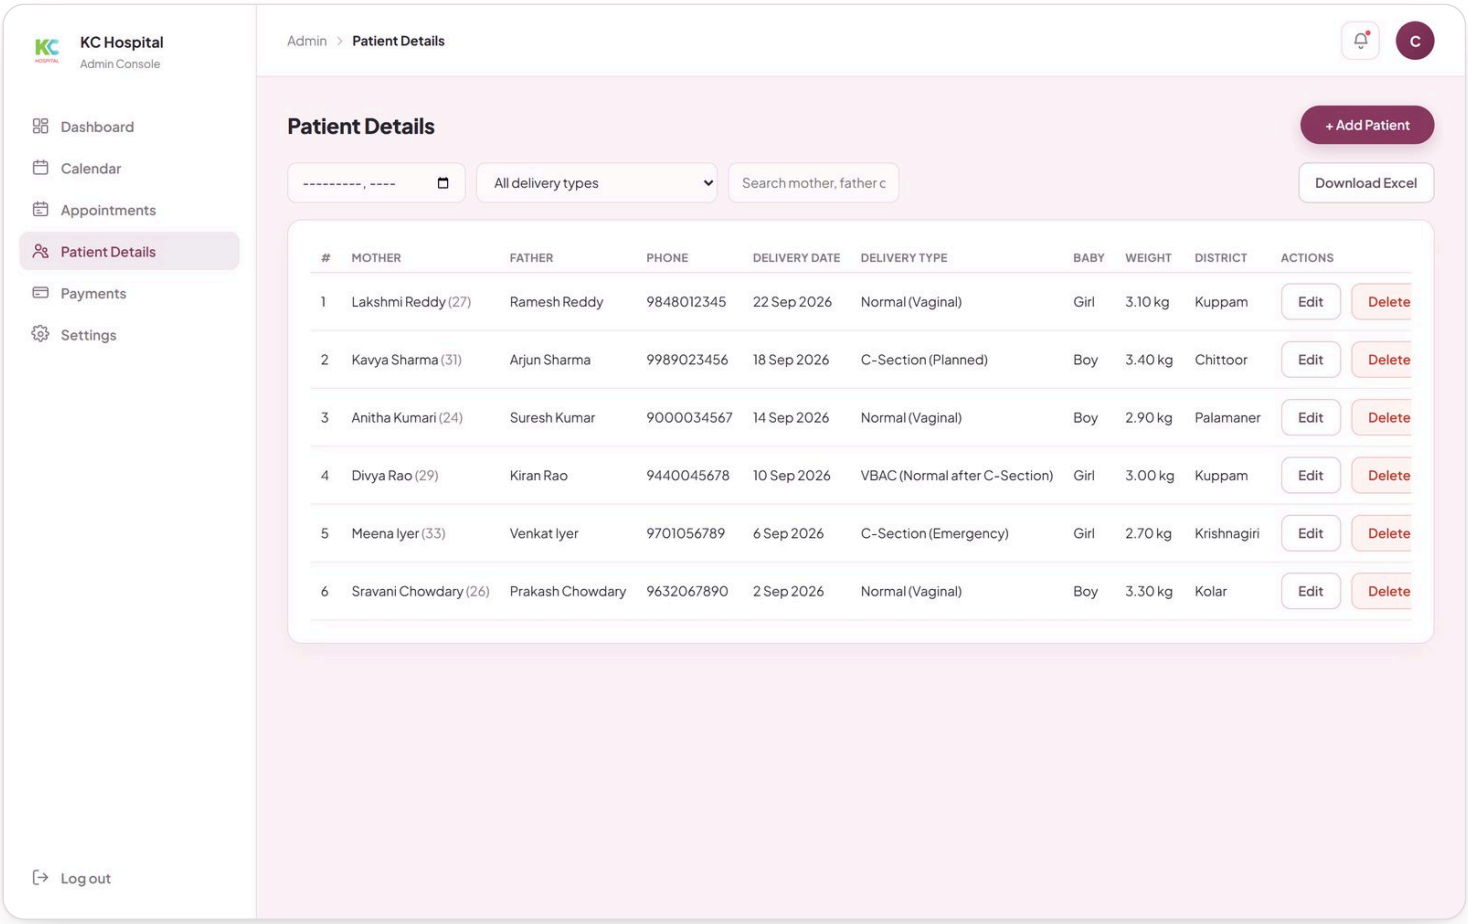

- Every payment with its amount, method and UPI reference
- Confirm or reject a pending payment. Confirming it sends the patient's confirmation.
- Filter by date or status, and search by patient

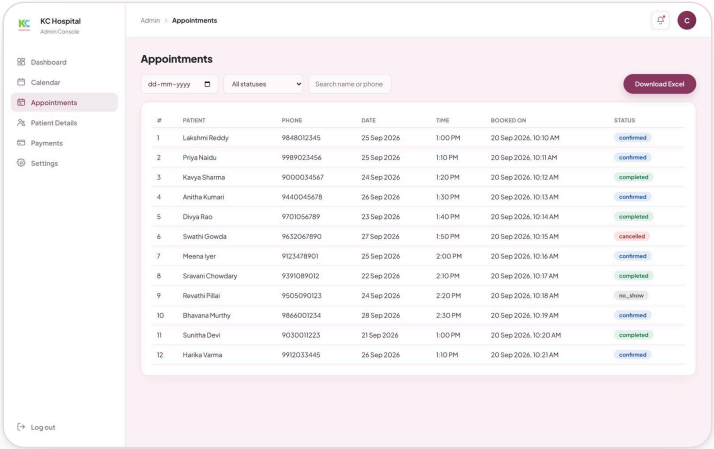

PATIENT DETAILS

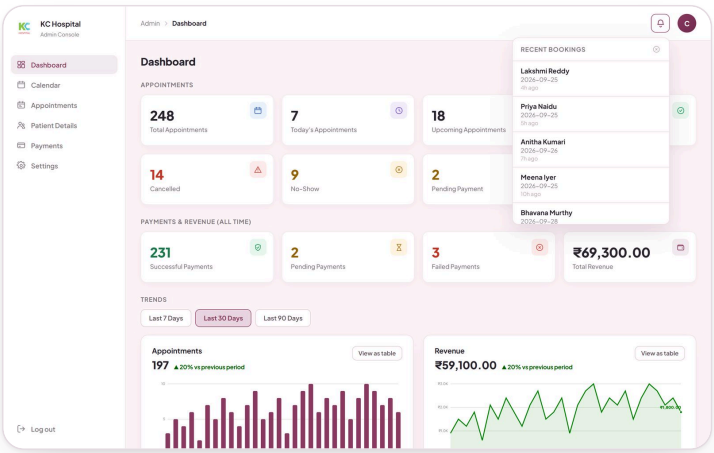

Delivery records that used to live on paper

- Mother's and father's details, address, delivery date and type
- Baby's birth date and time, gender, weight and blood group
- Filter by month or delivery type, edit or delete a record, export to Excel

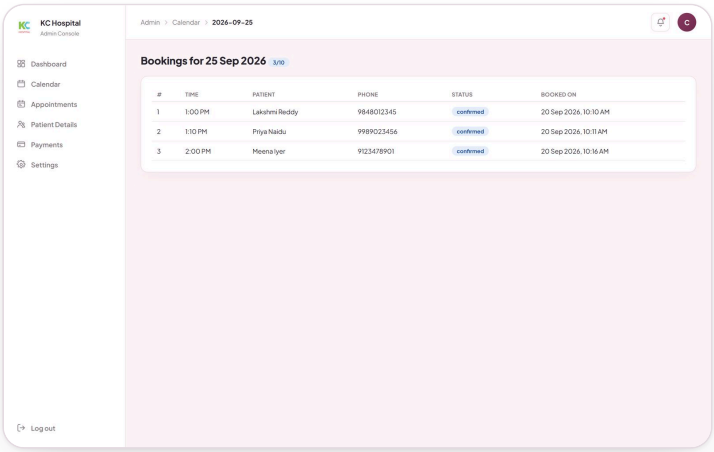

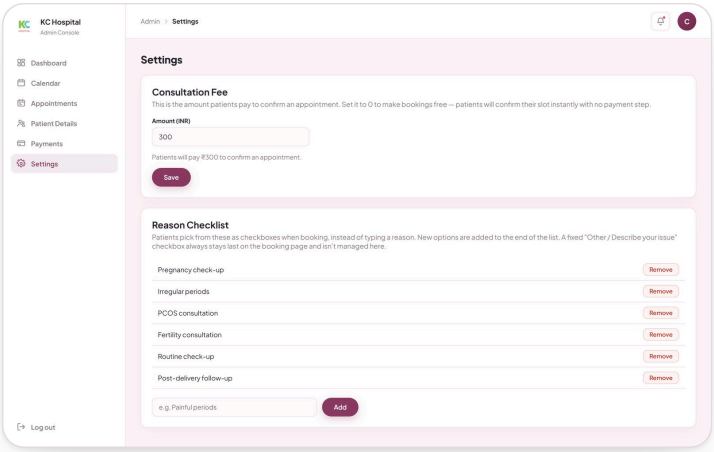

Appointments. Search, filter by status, mark completed or no-show, edit details.

Notifications. The bell in the header lists new bookings as they arrive.

Day view. One day's bookings in time order.

Settings. Change the fee (₹0 makes booking free) and manage reasons for visit.

UNDER THE HOOD

Built so a busy day doesn't break it.

A clinic can't afford a double booking or a lost payment. These rules are built into the system itself.

A slot can't be booked twice

The final booking is written to the database in a single step, one patient per slot. Two people paying at the same moment can't both get 1:40 PM.

Nothing is saved until payment

The patient's details stay in their browser until they submit the payment reference. Abandoned bookings never block a slot.

Each payment is counted once

A UPI reference that has already been used is rejected, so one payment can't confirm two appointments.

One failed message doesn't stop the rest

WhatsApp, SMS and email are sent separately. If one fails, it is logged and the others still go out.

Deleting is reversible

Deleted appointments and patient records are hidden, not erased, and live bookings can't be deleted by accident.

It recovers from slow starts

If the database is slow to wake up, reads are retried automatically, so the first visitor of the morning still gets a working page.

LAYER	WHAT WE USED
WEBSITE	**React + Vite** Mobile-first, four languages, speak-to-fill form.
SERVER	**Python (Flask) on Gunicorn** Checks every booking on the server, manages slots, and coordinates payments and messages.
DATABASE & LOGIN	**Supabase (PostgreSQL)** Stores appointments, payments and patient records. Admin sign-in is restricted to approved staff accounts.
PAYMENTS	**UPI QR, with Razorpay support** Direct UPI with no gateway fees. Razorpay card and netbanking checkout is built in and can be switched on.
MESSAGING	**Twilio (WhatsApp, SMS) + Resend (email)** Sends confirmations to the patient and the clinic. An automated confirmation call is available as an option.
HOSTING	**Railway** Frontend and backend deploy from GitHub and run on the clinic's own domain.

HOW IT CAME TOGETHER

Launched first, then improved from feedback.

We launched a working version first, then added features as the clinic started using it every day.

13 Aug 2026

Launch build. Website, slot booking, online payment and WhatsApp, SMS and email confirmations.

17 Aug

Switched to UPI QR payments. Patients pay straight into the clinic's UPI, and duplicate references are blocked.

18–19 Aug

Admin tools. Editing appointments, a page for each patient, faster loading and Excel export.

31 Aug

Telugu, Tamil and Kannada across the whole site, with reasons for visit translated automatically.

12 Sep

Reliability. Automatic retries when the database is slow to start.

24 Sep

Patient details. Delivery and newborn records with search, edit, delete and Excel export.

BUILT BY CRAFTLANEE

Want a front desk like this for your clinic or business?

We design and build websites, booking systems and admin tools for clinics and small businesses. We tailor each one to how your team already works.
